Washington, DC 20500

Dear Mr. President,

In regards to your energy policy and your stand on nuclear power I would like to make the following recommendation:

To defuse the intense opposition you will encounter over Yucca Mountain, and the transportation of nuclear waste to that site, and to provide the American people and the world with an excellent solution to the problem of nuclear waste, and do so relatively inexpensively, I propose that you handle nuclear waste by passing a federal law mandating all nuclear waste be loaded into to rupture-proof containers and shipped to a space launch site, (perhaps Cape Canaveral or Vandenberg Airforce Base), loaded into specially designed and equipped rockets, and sent to the sun, where it will be burned up harmlessly.

Not even the most whacked out environmentalist can object to such a plan, and I think the American people, and indeed the world will be calmer to know that nuclear waste will be forever, finally, and completed, and safely disposed of, never to pose a threat to human kind, or the environment, no matter how far one projects out into the future.

Very truly yours,

William Doolittle
